

Porsche 3rd Brake Light Installation

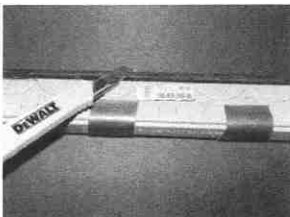

1. Remove brake light by gently prying end tab straight up, do not pry at an angle, this will break off plastic key on tab. Once tab is removed, turn lock Clockwise 90.

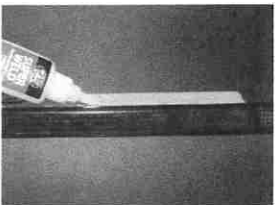

2. Pull brake light out at a slight angle. Depress tab on electrical connector on left hand side of light fixture and remove light.

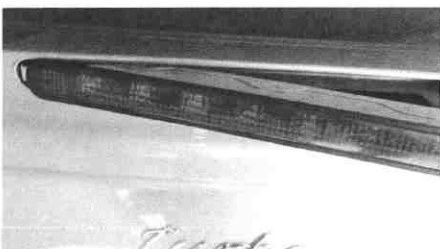

3. Remove Plastic lock and place in a safe place.

4. Remove all of the remaining old rubber gasket.

6. Glue new gasket into place aligning it with the front edge of the light fixture lens.
Glue round ends first, then the sides.

7. Once glue has dried, Re-install brake light.
